**Confidence Rings™**
Venous control for weak erections

The soft comfortable, “Confidence Ring™,” (patented) encircles the base of the penis, gently restricts outflow, thereby sustaining a firmer erection, while not inhibiting arterial flow or the ejaculation process. The Confidence Ring™ is packaged with free lubricant, instructions and two rings (Regular and Firm Control). The unique ring stretches easily to allow for proper fit without a tourniquet effect. Elasticity lasts an average of 12 months.

**ONLY $39.50**

**Basic Penile Vacuum Non-Prescription Unit**

- Used with the Confidence Ring™ for non-invasive impotence management.
- Regular use helps keep penile arteries clear by preventing build up of fibrous tissue.
- Non-Prescription Unit is **not reimbursable** by Medicare.

**ONLY $179.50**

**Complete Erection Inducer Device™**
For Non-Invasive Impotence Management

Reimbursable by Medicare Part B

The Complete Erection Inducer Device™ is effective for almost all diagnostic categories of impotence. This device enables a man to achieve an erection by drawing blood into the penis via the vacuum effect created by the EID™. The erection is then maintained by the patented Confidence Ring™. The EID™ is safe, 98% effective and has no long term debilitating side effects. This method is the safest treatment available for the management of impotence.

- Covered by Medicare Part B and most insurers when prescribed by a physician.
- Lifetime free replacement warranty on major components of the EID™.
- 90 Day partial to full refund if you are unable to achieve satisfactory results with the Complete EID™.

**ONLY $249.50**

Understanding Impotence

An erection is achieved by stimulation of penile nerves and increased blood flow into the penis.

An erection is maintained by limiting the outflow of blood through the veins of the penis.

Problems in achieving an erection are often caused by disorders to nerve endings in the penis, blocked arteries, and hinderance to blood flow such as, *neurological diseases, high blood pressure, diabetes, and hardening of the arteries*. Many medications may affect blood flow as well.

Problems in maintaining an erection are often caused by rapid outflow of blood from the veins of the penis. This condition is known as *Venous Leakage*, and may be caused by weak tissues, age, and side effects from medications.

Causes:

Many men experience difficulty due to:

- Prescribed Medications
- Venous Leakage
- Stress
- Aging
- High Blood Pressure
- Marital Problems
- Substance Abuse
- Performance Anxiety
- Depression
- Smoking
- Diabetes Mellitus
- Vascular Disease
- Prostate Surgery
- Spinal Cord Injury
- Radiation Therapy
- Multiple Sclerosis
- Parkinson’s Disease
- And more. Please ask your physician

You should not use the Performance Plus™ Method when the following conditions exist:

- Active Leukemia or Bleeding Disorders
- Venous Stasis of the Penis
- Amyloidosis
- Multiple Myeloma
- Polycythemia
- Spinal Cord Tumor
- Tumor of the Penis or Untreated Cancer
- History of Priapism (prolonged erection)
- Sickle Cell Anemia

Caution is advised when used with therapeutic doses of Anticoagulant Agents.

---

If you have Medicare Part B and want to be reimbursed for the Complete EID™, have your physician complete this section of the form.
